RE: Docket No. 07-16

Dear Secretary Dortch:

I recently read that your commission is reviewing M2Z Networks' petition w provide free, broadband internet. This is a brilliant idea could spark a small business revolution in America which is exactly what we need to thrive in the new global economy!

With a little more research, I learned that only 35% of small and independent businesses have company websites and only 59% use the internet for business related activities.

Under this plan, a nationwide wireless broadband data network would be available without any fee to all American families and small business entrepreneurs. In addition to addressing that technology deficit, this proposal seems to have plenty of other wonderful benefits including:

- Keeping America's economy strong and competitive, especially with countries
 where affordable broadband is already widely available; and
- Helping small and independent businesses rake advantage of online marketing opportunities:
- Allowing small and independent business to participate more fully in ecommerce.

As a Maryland business owner that services technology companies across the country, I can personally attest to benefits of such a proposal, and I hope you will join me in endorsing this plan to help our entrepreneurs in our state and across America.

Sincerely,

Charlyne H. McWilliams, Founder/CEO
